

Terms of Use

- 1 These terms of use apply to the web site, applications, apps, software-as-a-service, software, services, programs, calculators, downloads, design tables, workbooks, worksheets, databases, technology, analysis methodology, tutorials, photos, images, icons, concepts, and "Watershape Advisor" series of tools; hereafter and collectively "Tools".
- 2 Use of the Tools is agreement to these terms of use. If you do not agree to these terms, you may not use the Tools.
- 3 The Tools and this agreement are copyright 2004-2014 by David J. Peterson, P.E. The Tools are the exclusive property of David J. Peterson, P.E. and all rights are reserved. We reserve the right to add, delete, or modify any and all Tools. We reserve the right to modify these terms of use.
- 4 The Tools are available for the exclusive use of our employees and clients.
- 5 The Tools provide certain data, advice, or guidance to the user; however, the information is incomplete and non-comprehensive. Design and engineering is a complicated matter requiring multiple disciplines and decisions influenced by interrelated and conflicting parameters that are not easily solved by linear and explicit software and analysis methodology. Furthermore, these Tools are limited in their scope and ability. In other words, these Tools cannot replace the education, training, additional design and engineering, and decisions that may be required to solve a particular design or engineering problem.
- 6 The Tools use certain equations, formulas, iterations, analysis methodologies, constants, variables, measurements, unit conversions, and other technology that may not represent the specific parameters of a particular project. For example, the kinematic viscosity used in an equation may be specific to 82°F (27.8°C) freshwater but the project may require seawater or a much different temperature. In some cases the user can control that variable but not in all Tools (particularly design tables where the data is static). Most equations, constants, and variables are referenced so that the user can use their own judgement in the validity of the information and the need to make adjustments. There is no guarantee or warranty that the Tools are accurate for any particular project or that their analysis will match that of any other analysis tool.
- 7 Equations, formulas, iterations, analysis methodologies, constants, variables, measurements, unit conversions, and other technology vary from one reference to another. Researching multiple collegiate textbooks and performing internet searches for specific equations results in varying degrees of accuracy, rounding, assumptions, and units. Extensive research was done to find the most accurate equations and parameters and then the equations were rearranged, substitutions made, and finally unit conversions were completed to reduce the equations to user-friendly statements. There is no guarantee or warranty that the Tools are accurate for any particular project or that their analysis will match that of any other analysis tool.
- 8 Use of the advice or guidance provided by these Tools is under the complete control of the user and Watershape Consulting, Inc. assumes no liability for the input, output, or the interpretation of the information. When it comes to software, garbage in is garbage out, so if you are unclear about what to input or what the output is, or how to interpret values, feedback, and warnings then do not use the Tools. Misuse of the Tools may result in analysis errors that we have no control over and there is no guarantee or warranty that the Tools will prevent input, output, or interpretation errors. Furthermore, there is no guarantee or warranty that the Tools will provide important feedback or warnings. For example, a calculation may indicate the velocity of water through a suction outlet cover but may not warn that the velocity exceeds a local code requirement.
- 9 As with all software, the user must use their own care and judgement to ensure the accuracy of the results. A design professional should be consulted to ensure the project's success. Watershape Consulting, Inc. is not liable for materials, labor, permits, fees, taxes, or other costs, either direct, indirect, or consequential, for work performed using these Tools, or damage, repairs, replacement, maintenance, or corrections that may be required due to the use of these Tools.
- 10 Some of the Tools are provided free of charge and they are offered as-is with no phone or email support. Suggestions may be submitted via email to advisor@watershapeconsulting.com.
- 11 Please direct any communications related to the Tools and these terms of use to:
